

ASP

addressscreener.com

## THE RETURN MAIL ASP SOLUTION.

*Increase productivity and cut costs by automating your return mail with Addressscreener.com. It lets you select your data source — right from your browser — to locate your customer's most current address.*

*The correct address is automatically formatted and sent to the print queue for label printing. There's no need to re-key data. And you can reduce your costs even more by using TCI's data sources. You'll get the same information, the same reliability, at a fraction of the cost.*

# Addressscreener.com<sup>®</sup>

## THE ASP SOLUTION FOR RETURN MAIL

Search for new addresses by social security number or last known address

Tracking reports list each new address by reference number and repository

Search secondary repositories for additional addresses automatically

Select the label format of your choice

### The smart solution for return mail processing

Now you can automate your labor-intensive and costly return mail process with **Addressscreener.com**. Our latest ASP solution optimizes productivity and accuracy while minimizing delivery delays and costs.

#### Here's how:

- Using just a PC and browser, authorized employees enter a customer's social security number or returned mail address.
- **Addressscreener.com** searches your credit bureau or other data source\*, or a TCI data source, to find the last known address.
- If the address is accepted, the label is instantly formatted and sent to a print queue for label printing.
- The user can select other data sources to continue the search.
- Customizable features enable you to update your legacy system automatically or streamline workflow requirements for added functionality.
- No investment to make in hardware or software. Pay only a low usage fee.

#### **Addressscreener.com** is simple, flexible and functional so you can:

- Enter up to 36 social security numbers at a time.
- Sort results by date, application or status.
- Search feature displays up to 250 records at a time.
- Three security levels — Administrator/Supervisor/General User.
- For additional security, you can pre-define IP addresses and limit access by time of day.
- Generate address labels immediately or hold in printing queue until page is full.

#### **Automated processing yields fast, accurate management reports including:**

- Listings of new addresses by reference number and data source.
- Previously pulled reports can be retrieved by client, group or department for the past 30, 60 or 90 days.
- Completed transaction report lists the details of each label printed.

\* Both GLB data and non-GLB data.
